

Database

Given the following tables:

- `users(user_id, name, email, created_at)`
- `products(product_id, name, description, price, created_at)`
- `orders(order_id, user_id, total_amount, order_status, created_at)`
- `order_details(order_detail_id, order_id, product_id, quantity, unit_price, subtotal)`
- `reviews(review_id, product_id, user_id, rating, comment, created_at)`

Write a query to:

1. Identify the top 3 users who have spent the most money on orders.
2. For each of these users, list their top 2 highest-rated products.
3. Top 5 most popular products
